1 Public summary

Previous document D43.1 "Detailed Scenarios for Paris demonstration" precisely described the scenarios to be demonstrated in Paris as part of the SECUR-ED project.

Thanks to these scenarios the security improvement needs of the current system have been highlighted. They are the security needs of the system for the demonstration.

This document D43.2 "Functional Specifications for Paris demonstration" will precise the functional modules and the capacities which must respond to the needs described in D43.1. This security system has to respond to major threats (e.g. Terrorism) and also to more day-to-day threats (theft, aggression, traffic, etc.).

Following this document, D43.3 will finally design the system specified in this document for integration to the Paris demonstration.
