# 1 Abstract & Purpose

## 1.1 Public Summary

Deliverable D44.4 explains the Milan experimentations showing their main phases and describing how the scenarios defined in D44.1 are played. It is relative to task 44.3 called "Experimentations", which can be divided in several parts:

- Play scenarios defined in task 44.1
- Verify that the system answers correctly to the identified threats, and that the capacities are robust and interoperable.
- Support the organisation of events related to this specific demonstration
- Eventually, capacities updated according to the requirements defined in the integration phase will be integrated during this phase

This deliverable in the first parts summarize the SITs, Dry-runs and demo sessions date, providing a summary of the timeline of the work done in WP44 to reach the goal of the practical experimentations.

Then for each scenario, after a quick summary of the frozen scenarios and the capacity involved, there is a brief description of demo session and events.

The feedbacks on the results obtained and the comparison with those expected is assigned to the deliverables D44.5 "Consolidated results" that will follow, which will also describe all the incident reports.
