## 1. Public Summary

The objective of this document is to present the scenarios selection made by Metro Bilbao, based on the Risk Assessment carried out within the SECUR-ED project scope. It includes the detail of the existing facilities available at Metro Bilbao installations, related to the running of the demo of the capacities selected. The document also provides an insight about the different solutions provided for partners to cover those capacities, until the final definition of scenarios to test and functionalities selected to be used, together with information about the final demonstration event.

The initial selection of capacities was reduced, from the initial selection presented in the kick-off meeting (see R[1]), taking into account the complexity of some scenarios and actual relevance for the Operator, thus providing better options for the successful implementation of the demo.
