## Public summary

This tool is intended for public transport operators, security managers and other position holders. It is in PowerPoint format, which can be converted into a computer based training (CBT) module. This deliverable has three key objectives:

- Enrich the knowledge of these target audiences about security management in public transport systems;
- Impart knowledge concerning methodologies of risk assessment, security operation planning and emergency management; and
- Describe specific solutions that were assimilated into the SECUR-ED project

The deliverable includes four main chapters: Public transport security concept; security operations & incident response planning; training programmes development; and SECUR-ED solutions.

### (1) Public transport security concept

This chapter presents the security concept for public transport systems, and focuses on its three components: Security organisation set-up; risk based strategy for security management; and risk mitigation safeguards and policies.

### (2) Security operations & incident response planning

This chapter includes two parts. The first relates to the development of the concept of operation (CONOP) for a security operation, based on the deliverables of the COUNTERACT project (PT5 / Part B). The second is based on SECUR-ED outputs in the context of incident response planning, as developed within the framework of the project – the emergency and crisis preparedness handbook and relevant lesson plans.

### (3) Development of training programmes

This part is based on the project's outputs having to do with training. It is comprehensive, and encompasses a broad range of topics, such as the definition of the training goals; the development stages of security trainings; the definition of target audiences for trainings; training methods; the development of training kits; the definition of topics, content and training methods based on the target audience; safety in training; and managing training documents.

### (4) SECUR-ED solutions

The last part of the handbook relates to technological solutions developed within the framework of the project. It is based on the following capacities, which were developed under the project and demonstrated in flagship and satellite demonstrations:

- Integrated on-board train protection solution
- Video analytics functionalities
- Depot and stabling area protection
- CBRN-E detection and identification
- SOA architecture and information management solutions

- End of Document -
