1 Public Summary

The SECUR-ED project developed several technical and operational capacities to enhance security in public transportation.

Close to the end of the project, it is necessary to understand how these capacities could be deployed by the Public Transport Operators or law enforcement services.

Because they are dependent on some of the others, and because these capacities aim to serve a global strategy of security, this document summarizes the technical and operational needs for all the capacities (their functionalities are detailed in the others SECUR-ED deliverables) and the interactions between them.

In addition, an appendix includes the description of the final results of Paris demonstration, as this demo has run for 6 months and some items were not described in WP43 deliverables.
